1. Description of the module

This router app is not contained in the standard router firmware. Uploading of this router app is described in the Configuration manual (see Chapter [Related Documents](#)).

This module handles IP address assignation for devices according to its MAC OUI (first 3 bytes of MAC address). For example when you have multiple devices from certain manufacturer, they usually have same MAC OUI and this module can help you with assignation of IP address for all of those devices.

For *DHCP based on MAC OUI* router app to work, you have to disable routers own DHCP protocol.

2. Web Interface

Once the installation of the module is complete, the module's GUI can be invoked by clicking the module name on the Router apps page of router's web interface.

Left part of this GUI contains menu with Status menu section and Customization menu section. Customization menu section contains only the Return item, which switches back from the module's web page to the router's web configuration pages. The main menu of module's GUI is shown on Figure 2.

Figure 1: Menu

2.1 Configuration

2.1.1 Global

All DHCP base on MAC OUI router app settings can be configured by clicking on the *Global* item in the main menu of module web interface. An overview of configurable items is given below.

Figure 2: Configuration

Item	Description
Enable	Enables usage of DHCP based on MAC OUI functionality. In this case please disable DHCP client in Router configuration.
Free Pool Start	Enter first IP address from range
Free Pool End	Enter last IP address from range
MAC OUI & IP Address pair	Enter up to 8 rules for IP address assignation according to MAC OUI
