5G / 4G LTE / 3G HSPA+ / UMTS / EDGE / GPRS Cellular Routers & Gateways...
features and platforms overview...

Flexible, effective and secure networking

Advantech routers enhanced functionality incorporates self-diagnostics and make it a cornerstone to ensure secure and consistent operation and ultra-reliable wireless connections. With multi-SIM card holders and automatic failover routers provide wireless redundancy for critical applications along with SMS/email messaging and control capability for remote alerts and resets. They support the most commonly used LAN/WAN network protocols. The goal is flexibility, effectiveness, and security in a large variety of applications.

Advantech routers are based ICR-OS operating system (Linux Kernel) that combines the simplicity of a web-based configuration with the flexibility of an open platform that allows the development of custom configuration scripts and RouterApps (software User Modules). ICR-OS serves also as a gate for router integration into additional monitoring and security software platforms – WebAccess/DMP, WebAccess/VPN, and R-SeeNet. Those platforms enhance router security of communication, remote management, and hardware/software monitoring while increasing significantly user comfort and stability in operated networks.

Networking

- DHCP: automatic IP addressing in LAN network
- NAT/PAT: IP address and port translation
- VRRP: virtual backup router function
- DNS/DHCP: client: access to the dynamic IP address
- VLAN 802.1Q: virtual LAN
- QoS: quality of service
- PPPoE Bridge: PPP over Ethernet Bridge mode
- NTP/NTP server: time synchronization
- Dynamic routing protocols: BGP, OSPF, RIP, IS-IS, NHRP
- MDDR/RTU/TCP gateway and mapping: convert data from RTU to TCP/IP format
- Backup routers: back up of the primary connection with alternative connections to the Internet (mobile network) or enabling Multiple WANs mode
- Dual stack (IPv4 and IPv6) support
- Load balancing: the weight for every router interface can be set

Multiple SIM for carrier failover

- Back up by switching between up to 4 independent mobile carriers according to router model
- Switch when data limit is exceeded, when roaming is detected or by any other programmable option
- eSIM support

VPN Tunneling & Security

- IPsec, OpenVPN, PPTP, L2TP, EasyVPN, GRE, WinGuard
- Authentication by certificates, shared keys, name/password, RADIUS, 2FA
- HTTPS, SSH, SFTP, DMZ
- Firewall: filtering of addresses, ports, protocols
- IPSec secure chip for v4 router platform (5G and LTE Advanced)
- PCI/DSS compliance

Remote Router Supervision & Mass Network Management

- HTTP/HTTPS, Telnet/SSH for local and remote configuration and firmware updates via WAN, locale configuration and firmware updates via LAN
- Schedule automatic configuration and firmware updates from your FTP/HTTP servers, Backup & Restore configuration
- Up to 4 independent configuration profiles can be stored and remotely switched using scripts, SMS messages, I/O, etc.
- Additional management, monitoring and self-diagnostic software platforms WebAccess/DMP, WebAccess/VPN and R-SeeNet

Hardware Platform v4

| 5 x 10/100/1000 Ethernet, PoE, SFP, RS232, RS485, CAN, GPS, I/O, WiFi | 2 - 5 x 10/100 Ethernet, PoE, RS232, RS485, CAN, GPS, I/O, WiFi | 1 - 4 x 10/100 Ethernet, RS323, RS485, I/O

Diagnostics

- Status – Signal Strength, Data Usage, Detailed Long Term Statistics
- One CLICK report – Current Configuration, Factory Identification, Routing Table
- Log – System Log, Reboot Log, Kernel Log
- Remote Diagnostics (via SSH)
- SNMP: router diagnostics, communication with I/O and MIBs
- LED indication: signal strength, connection status, ports, customer’s application LED
- StartUp script & Up/Down script: possibility to customize rules based on digital inputs status, network parameters, data usage, time, power, device temperature etc.
- Information about status, connection or disconnection and many other parameters
- SMS control: on/off connection, switching SIM, router profile, I/O
- SMS communication: AT commands (RS232 and TCP/IP), I/O or HTTP
- SNMP traps

Event Engine and SMS & E-mail Info

- StarfIp script & Up/Down script: possibility to customize rules based on digital inputs status, network parameters, data usage, time, power, device temperature etc.
- SMS: on/off connection, switching SIM, router profile, I/O
- SMS communication: AT commands (RS232 and TCP/IP), I/O or HTTP
- SNMP traps

Application Development

Based on Linux Kernel Advantech cellular routers & gateways combines the simplicity of a web-based configuration with the flexibility of an open platform that allows the development of custom configuration scripts and RouterApps (software User Modules).

- Open Linux, BASH, C/C++ supported
- Python for v3 and v4 platform
- Node-RED (for v3 and v4 platform)
- Docker
ICR-4400
Ultra High-Speed Router & Powerful Edge Computing Gateway

The new router platform “v4” serving as intelligence at the network edge with an extremely powerful Cortex A72 CPU at 1200 MHz, 4 GB eMMC memory, 4 MB flash memory, and 1024 MB RAM. The focus on high security underlines TPM 2.0, secure chip inside and Temper Button that ensures safe-use in critical infrastructure systems. The ICR-4400 router models are powered by the ICR-OS Linux operating system that provides a wide range of standard and enhanced networking features. A secure web interface allows users to configure and manage routers from remote locations, routers support multiple configuration profiles, automatic firmware updates, and many more. As ICR-4400 is ready to operate in a standard and highly customized software environment as well it is truly born as a powerful edge computing gateway for today’s world. Operators are free to use standard web configuration, Linux scripts, AT commands and add new features by additional software applications called Router Apps (User Modules). There is an existing free library of Router Apps or the user may create its own app using Advantech SDK. The gateway can easily run applications like Node-RED or Docker that open the way to a multi-container world.

The ICR-4400 is designed and manufactured for use in tough environmental conditions. Specifications include a wide operating temperature range from -40 to +75 °C, it accepts input voltage range from 9 V DC to 48 V DC and is equipped with sleep mode for reducing electrical consumption. As a standard, ICR-4400 offers to the user for connection two Ethernet 10/100/1000 Mbps (1 × independent and 4 × switch), optical connectivity when SFP cage (independent port) used, one USB host 2.0, microSD reader, serial lines RS232 and RS485, CAN Bus, two binary inputs, and two binary outputs. The cellular router models contain two SIMs readers which are placed on the rear side of the device.

There is also the possibility to use one eSIM as the chip on the device in projects. ICR-4400 has two mPCIe connectors that can be used for optional two WiFi modules. Electronics inside devices are well protected by robust metal casing for a wall mount (DIN mount is optional). New router platform “v4” is easy to be managed by using WebAccess/DMP tool - full-featured cloud-based management for provisioning and monitoring of routers simplifying operation mainly in mass deployments. Routers support also the connection to WebAccess/VPN that is a perfect way to create secure virtual private networks on the Internet.

ICR-4400 available models

Routers are now available in 4 production models – 5G models ICR-4483 and ICR-4461, LTE Advanced model ICR-4434, and ICR-4400 without cellular connectivity onboard. ICR-4483 and ICR-4461 models development was motivated by the raising of 5G networks globally. We responded by ultra-high-speed 5G NR (Non Pico) router & powerful edge computing gateway that is focused on global market challenges. The 5G “gigabit” speed, low latency, and guaranteed quality (SLA) of connectivity is a real step forward to a massive IoT and Enhanced mobile broadband (eMBB) applications – Mobile Internet access, Camera and security systems, industrial systems, and many other high data demanding applications. The router supports fallback via LTE (LTE-A Pro) and 3G networks for areas where 5G coverage is not well developed yet.

The next model is ICR-4434 - high speed 4G router & powerful edge computing gateway focused on the global market. The LTE-A Cat.12 worldwide connectivity with 3G fallback brings an ideal technology mix for high-demand data transfer in IoT/ADN applications. Due to the high-speed data transfer of up to 600 Mbps (download) and up to 150 Mbps (upload) this router is an ideal solution for specialized M2M devices and IoT. It serves well also for the wireless connection of traffic and security camera systems, individual computers, LAN networks, industrial systems, and various self-service terminals.

ICR-4461 provides the fast and stable connection to customer networks where using wired interfaces is required only. It might be interesting for example from the security points of view where the router can separate LAN’s in the customer network and provide at the same time excellent interoperability with other Advantech ICR routers using the same ICR-OS firmware and advanced security and monitoring tools.
ICR-2700 Libratum and ICR-2800 are fully compatible enhanced successors of Advantech’s balanced-features cellular routers LR77v2 and LR77 v2 Libratum. Interfaces offer even more features and improvements such as a USB port, more detailed LED indication, and mainly more powerful CPU and ample of data storage to ensure a long lifecycle (software updates) with broad software customization possibilities for the user. Routers has also a TPM 2.0 chip (Trusted Platform Module) onboard verifying router integrity to provide trusted solutions as a response to increasing cybersecurity demands in many industrial and public sectors. Routers have the same dimensions as their v2 platform predecessors.

The hardware of routers is the same for both routers and includes 600 MHz CPU based on ARM architecture and 128 MB of RAM. Along with 4 GB memory and 897 MB for Router Apps and 512 MB for customer data you get the device you might use as a cellular communication device or IoT gateway that moves the intelligence at the edge of your network. The cellular routers are equipped with the most popular interfaces that include 2 × Ethernet 10/100 ports with two independent LANs/IP addresses, 1 × USB 2.0 host port, and 2 × plate covered SIM card holders for automatic failover to an alternate service provider. ICR-2800 extends the application possibilities of ICR-2700 for serial interfaces and a large number of digital IOs.

Routers are powered by well-known Linux-based Advantech’s operating system ICR-OS. A secure web interface allows users to configure and manage both routers from remote locations. Routers support real-time data encryption and establishing of VPN tunnels using IPsec, WireGuard, OpenVPN, GRE, etc. It supports standard and advanced networking features like DHCP, NAT, NAT-T, DynDNS, NTP, VRRP, control by SMS, and numerous other functions.

Both routers are ready to easily install individually and in mass deployments scenarios too by using a full-featured configuration and monitoring software tool WebAccess/DMP. Safe remote VPN access to customer devices and PCs connected to routers through Internet can be administrated by additional software WebAccess/VPN.
ICR-2000, ICR-2400, ICR-2500, ICR-2600

Entry-Level 4G Routers

Product Features:

- LTE Cat. 4 with 3G/2G fallback
- up to 2× SIM for redundancy
- up to 4× Ethernet 10/100 Mbps
- optional 1× RS232, 1× RS485
- 1× DI, 1× DO
- Wide operational temperature range
- Wall and DIN mount options
- Linux based OS & SW customization

Industrial cellular LTE router models ICR-2000, ICR-2400, ICR-2500 and ICR-2600 are designed for wireless communication in cellular 4G/LTE Cat.4 networks with fall back to older 3G/UMTS/HSPA+ and 2G/GPRS/EDGE cellular networks. ICR-2000, ICR-2400, ICR-2500 and ICR-2600 are designed for different LTE categories (Cat. 4, Cat M1/NB-IoT, Private LTE bands, 450 MHz). Depended on a specific router model providing LTE connectivity for the diverse needs of modern communication systems.

The differences between the models are in a number of 10/100 Ethernet ports and serial lines for connection. The router ICR-2000 is equipped with one 10/100 Ethernet port and one digital input and output (I/O). The router ICR-2400 is equipped with two independently configurable 10/100 Ethernet ports (LAN or WAN), 1× serial port RS232, 1× RS485, and with one digital input and output (I/O). The router ICR-2500 is equipped with four 10/100 Ethernet ports, and with one digital input and output (I/O). In comparing with ICR-2500, the ICR-2600 has an extra RS232/RS485 serial port. All routers support establishing of a VPN tunnel and various protocols to ensure safe communication. Routers provide diagnostic functions which include automatic monitoring of wireless and wired connections, automatic restart in case of connection loss, and a hardware watchdog that monitors the state of the router. Routers are based on the ICR-OS operating system (Linux platform) that enables wide possibilities of programming customer SW applications in Python, and C/C++.

There is also possible to benefit from the existing Router Apps (User modules) library with ready-to-use software developed to enhance specific router functionality including industrial protocol conversions and support of IoT platforms such as MS Azure, Cumulocity, and others.
ICR-3200
Industrial IoT 4G LTE Router & Gateway

Product Features:

- 4G LTE Cat.4, Cat. M1 VPN Gateway for Industrial IoT applications
- Powerful CPU with 1.3 GB storage to host customer SW applications
- 2× SIM with cover, eSIM ready
- 2× Ethernet 10/100, 1× RS232, 1× RS485 and I/O
- Optional Wi-Fi 802.11ac using MIMO technology
- Optional Bluetooth v5.1 (class 1)
- Optional GNSS receiver
- Robust metal cover with DIN and Wall mount options
- Operational temperature range from -40 °C to +75 °C
- Backup real time clock
- Sleep mode & Power ignition

The ICR-3200 LTE gateway is the perfect way to connect IP or serial devices to a cellular network. Industrial M2M and IoT applications include kiosks, industrial PCs, HMIs, traffic controllers, meters, UPS systems, and much more. With LTE Cat.4 upload speeds of up to 50 Mbps and download speeds of up to 150 Mbps, the router provides ample bandwidth for high data demand applications such as CCTV or public Wi-Fi hotspots. LTE Cat M1 version of the router uses a new cellular technology specifically designed for the needs of applications targeting the Internet of Things (IoT) or machine-to-machine (M2M) communications.

In addition to its two independent or switched Ethernet ports, serial ports RS232 and RS485, ICR-3200 has built-in digital I/O connectivity, backup real-time clock and sleep mode support. The device has two SIM readers protected by metallic cover for carrier failover redundancy. As an addition the router is ready to use internal eSIM. Optional built-in GNSS chipset provides information about the accurate position of the router. An optional built-in Wi-Fi module and Bluetooth v5.1 (class 1) modules are also available, with 802.11a,b,g,n,ac modes.

The router supports VPN tunnel creation using various protocols to ensure safe communications. The router provides diagnostic functions which include automatic monitoring of the wireless and wired connections, automatic restart in case of connection losses, and a hardware watchdog that monitors the router status.

The ICR-3200 places intelligence at the network edge with an extremely powerful Cortex A8 CPU at 1 GHz, 512 MB RAM and 4 GB eMMC FLASH memory in pSLC mode for a long-lifetime and critical industrial applications. 1.3 GB of memory space is allocated for customer SW applications and data.

ICR-3200 is easy to install using WebAccess/DMP, a full featured configuration and monitoring tool. Our VPN portal WebAccess/VPN makes it easy to build private network. The router also supports additional traffic and health monitoring software R-SeeNet.
### Product Features:

- Powerful CPU to support high demand customer applications
- Extended operational temperature range from -40 °C to +75 °C
- 10-60 V DC, reverse polarity voltage protection
- Flexible port options for SmartFlex router family
- Twin cellular module capability for SmartMotion router family
- GPS and GLONASS support
- MicroSD card holder
- Low power mode for solar and battery power applications
- PoE PD, PoE PSE, In/Out, USB Host
- Advanced security features (VPN, firewall etc.)

The **SmartFlex** and **SmartMotion** cellular routers provide secure Internet connectivity for devices and LANs via cellular networks. Routers provide transfer speeds up to 50 Mbit/s and download speeds of up to 100 Mbit/s meeting the high demand required for video transfer.

The **SmartFlex** and **SmartMotion** place intelligence out at the network edge with an extremely powerful Cortex A8 CPU at 1GHz, 256 MB flash memory, 512 MB RAM, and 128kB M-RAM providing full support for 4G/LTE speeds and applications. A secure web interface allows users to configure and manage routers from remote locations. Upgrade of configuration or firmware from the operator’s central server allowing simultaneous mass reconfiguration of every router on the network.

For **SmartFlex** there are available optional hardware boards that extend flexibility in the applications: optional board one offers extra 3× ETH 10/100 ports (the router can be configured with up to 5 total Ethernet ports and 3 independent LANs/IP addresses than) or optional board two with 1× ETH 10/100 – 1× RS232 – 1× RS485 (isolation strength up to 2.5kV) or optional board three with 1× RS232 – 1× RS485 or RS232. Both routers are based on ICR-OS operating system with full features onboard.

Routers can be connected to software platforms **WebAccess/DMP**, **WebAccess/VPN** and **R-SeeNet**.
## Entry Level Routers
### Basic Interfaces
- **ICR-2000 series**
  - LTE Cat 4
  - 1x SIM, 1x ETH, 100Mb
  - ICR-2001 - EMEA

- **ICR-2400 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, 100Mb, 1x RS485
  - ICR-2401 - EMEA

- **ICR-2500 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, 100Mb, 1x RS485
  - ICR-2501 - EMEA

### Enhanced & Flexible
- **ICR-4000 series**
  - LTE Cat 4
  - 5x Gb ETH, USB, 5x SIM
  - ICR-4001 - EMEA

- **ICR-4400 series**
  - LTE Cat 4, Cat 12
  - ICR-4400 - Global

## Industry Popular
### Port Options
- **ICR-3200 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, 1x RS485, 1x USB, CAT 4/6, WiFi

- **ICR-3800 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, 1x RS485, 1x USB, 1x WiFi

- **ICR-1600 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, 1x USB

### SMARTFLEX Series
- **ICR-3300 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, 1x RS485, 1x USB

- **ICR-3400 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, 1x RS485, 1x USB

## Platform v4
- **Ultra High-Speed 5G Router & Powerful Edge Computing Gateway**
  - Quad-Core CPU: 1.2 GHz
  - RAM: 512 MB
  - NOR Flash: 256 MB
  - 2× SIM, 2× ETH, RS232, USB

## Platform v5
- **Powerful Industrial 4G/LTE Routers & IoT Gateways**
  - CPU: 512 MHz
  - RAM: 128 MB
  - NOR Flash: 32 MB

## Platform v6 - Successors of v2
- **ICR-2700 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, USB

- **ICR-2700 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, USB

## Platform v7
- **ICR-3200 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, USB

- **ICR-3800 series**
  - LTE Cat 4
  - 2x SIM, 2x ETH, USB

- LISTED
WebAccess/DMP Generation 2 is an advanced Enterprise-Grade platform solution for provisioning, monitoring, managing and configuring Advantech’s routers and IoT gateways. It provides a zero-touch enablement platform for each remote device. With WebAccess/DMP, secure zero-touch pre-provisioning and pre-configuration is simple, regardless of how large your deployment is: from one device to thousands. The platform supports full multi-tenancy, with the possibility of permissions-enabled power-user oversight across tenancies.

Performance at Scale

WebAccess/DMP Generation 2 has been built for scale and performance. The backend service architecture includes high-availability broker clusters, with load-balancing and elastic scale enablement. Rest assured that your needs will be met, as you grow and scale your business.

Extensible Architecture

The platform has been designed for extensibility. Using leading-edge micro-services enabled architectural best practices, together with leading-edge elastic scale technologies, load balancing and brokerage services, the platform will scale-out as necessary. The user-interface is built on our publicly available API, via our publicly available API Gateway, which enables real-time extensibility to available functionality, and the ability to integrate functionally with your existing services and infrastructure seamlessly: plug in, build-out.

AssureAuth PKI

Security is built-in by design: we have built a full Public Key Infrastructure (PKI) stack into the product suite: your connected devices are securely provisioned, certified and authenticated.

Multi Tenancy

Every User must belong to at least one Tenant. Every User may belong to one or more Tenancies. Every Tenant has an “Admin” User, who decides on how to grant user-permissions. For each User, for each Tenancy they belong to, unique user permissions may be granted.

AssureSync Configuration Management

WebAccess/DMP Generation 2 has incorporated industry best-practice Digital Twin Device Model technology and combined it with real-time user-interface configuration status indicators. It is possible to granularly configure every possible configuration item on every device, as a Desired State. Every device will report its actual configuration, for every configuration item, which will be stored as a Reported State. Our AssureSync Configuration Management engine will detect differences between Desired and Reported states, and automatically reconcile differences.

Edge Intelligence App management

Deploy one or many of our pre-prepared RouterApps (also known as “user modules”) directly from WebAccess/DMP, to one or many of your remote devices. Manage the Apps and versions you deploy: you can “pin” a specific Router App version, for each of your selected devices, as a Desired State, and you can manage the configuration settings for each Router App, for each device it’s deployed on to.

Use the device’s SDK to build your own Edge Intelligence Apps, then use the WebAccess/DMP API to publish and deploy your own Router Apps, at scale: WebAccess/DMP enables you to build your own required platform-side user-interface automatically.

Router Apps that you create yourself will be managed through our AssureSync configuration management engine, just like our native Router Apps.

Secure Device Health Monitoring

Every remote device has build-in secure health-monitoring status indicators, that are reported to WebAccess/DMP, and stored in a Time-Series database: by default you get 2-months of history data, which you can zoom-in on and analyse at will, in real-time.

Location Monitoring is also available, and can be enabled to show you precise GPS based geographic-location for each of your remote devices (devices equipped with a GNSS module).

Built for Interoperability

WebAccess/DMP Generation 2 is Fully API Enabled: in fact, we built our entire user-interface application using the publicly-available secure REST based API, via our publicly available API gateway, which you can find at https://api.wadmp.com

This means that you have the power of interoperability with your existing infrastructure: integrate the available services that we provide with the services you wish to observe or consume.

Alerts and Auditing

Keep your finger on the pulse - get an Alert when somebody tries to change a password on your device, it is going offline, or the cellular signal level is not enough. Trackback on what happened over your ICR asset with the Auditing feature, know who and when made changes.
SMART DECISIONS BEGIN
with Intelligent Management Software

R-SEE NET

Monitoring & Management Software

R-SeeNet is the software system used for monitoring Advantech routers. It continuously collects information from individual routers in the network and records the data into a database. Then it creates visual forms and reports for the network administrator.

R-SeeNet consists of two parts:

- **R-SeeNet Server**
  A server application that can be programmed to automatically send SNMP queries (Simple Network Management Protocol) to each router defined in the network. The application retrieves status information from the routers and records it in the database.

- **R-SeeNet PHP**
  A web-based application that accesses the database and provides the user or network administrator with information about the status of individual routers as well as the status of the entire network.

Available Data

Everything you need to know about your network’s current status as well as a historical view of the information transferred today, yesterday, this week, this month and last month.

- Signal strength
- Data traffic
- Response time
- Router availability
- Number of mobile connections
- Number of channels connected
- Visual reports, tables and graphs
- Up to 2 months of past data for each router

WebAccess/VPN

Advanced Secure Networking Platform

WebAccess/VPN is an advanced VPN management solution for safe interconnection of Advantech routers and LAN networks in public Internet. Connection among devices and networks can be regional or global and can combine different technology platforms and various wireless, LTE, fixed and satellite connectivities.

WebAccess/VPN provides an easy and secure connectivity platform for applications such as branch connection, remote access, machine monitoring in industry sectors like Utilities & Energy, Automation, Predictive maintenance, Industrial IoT for any end device types such as Computers, PLCs, RTUs, Cameras, Terminals…

Product features:

- Secure Private Networks in Internet
- Encrypted & Reliable Communication
- Centrally defined VPN topology
- Managed LAN, 1:1 NAT modes
- Firewall & Access Control
- User-friendly Management
- Easy Deployment
- Extensive Platform Compatibility

WebAccess/VPN makes it easy to set, scale and supervise secure networks of Advantech routers and other devices in Internet environment.

WebAccess/VPN solves network security issues and provides secure connections for individual LANs.

All communication going through the VPN Portal is encrypted and hidden from potential intruders.

The architecture of WebAccess/VPN withstands common attack vectors. The network traffic runs through OpenVPN tunnels.

Independent of mobile operators. No need for public or static IPs. No need for private APN or DDNS.

Each device connected to the router within VPN network has a fixed private IP address for transparent communication.

User-friendly Management helps admins and users to configure and control routers in their defined LANs.

WebAccess/VPN is compatible with SCADA systems, Linux, Windows, Smart phones, Tablets etc. & existing network topologies such as Cellular, Fibre, Satellite, ADSL.
**Applications**

- **Transportation**
  - **Sydney Ferries**
  - Region: AUS
  - Product: ICR-3200
  - Application: Real-time monitoring of position Sydney Ferries
  - Features:
    - Multicast support - PM-SIM
    - GPS functionality - NMEA reporting
    - Functionality - IPv4/IPv6
    - VPN Functionality
    - A-SeeNET monitoring SW

- **Energy**
  - **Power Distribution Management**
  - Region: EMEA
  - Product: ICR-3200, SmartFlex, SmartMotion
  - Application: SCADA connectivity for power distribution company
  - Features:
    - Scalable LTE routers in terms of interfaces with the same SW environment
    - Centralized management tool - WebAccess/DMP
    - IEC103/104 protocol conversion provided by LTE router
    - Compatibility with current SNMP monitoring system Zabbix
    - Two Free VPN connections to two geographically separated firewalls due to redundancy
    - Support SCEP (Simple Certificate Enrollment Protocol) as a key part of robust cyber security

- **Industrial Equipment Manufactures**
  - **Monitoring of Elevators**
  - Region: NAM
  - Product: ICR-3211B - 4G LTE Cat. M1
  - Application: Remote monitoring of lifts using LTE Cat. M1 cellular routers
  - Features:
    - Capability addresses the challenge of getting a reliable cell signal in basements and other in-building locations
    - The built-in supercapacitor provides enough power for a "last gasp" message to be sent when the main power is lost
    - The ICR-3211B supports the required software development tool Python3 Cloud Monitoring needed for integration with its own web-based applications

- **Healthcare**
  - **Medical Device Connectivity**
  - Region: NAM
  - Product: SmartStart
  - Application: Monitoring of boiler system in hospitals, hotels and campuses environments
  - Features:
    - Node-RED support
    - Network edge data processing
    - Dashboard Display for remote monitoring
    - Alarm notification
    - SD card holder on router device
    - Galvanically isolated Ethernet and serial ports RS232/RS485
    - Open platform to host third party software
    - Wide temperature range
    - Over voltage protection

- **Transaction Management**
  - **3G/4G Connection for Lottery Terminals**
  - Region: EMEA
  - Product: ICR-2500, LR77 v2 Libratum
  - Application: On-line transactional networks for national lotteries
  - Features:
    - Dual SIM failover capability
    - Support of Multicast
    - DMVPN / GRE tunnels support
    - Automatic mass update of configuration and firmware update
    - Management and monitoring

- **Automation**
  - **Monitoring of Boiler System**
  - Region: ASIA
  - Product: SmartStart
  - Application: Monitoring of boiler system in hospitals, hotels and campuses environments
  - Features:
    - Node-RED support
    - Network edge data processing
    - Dashboard Display for remote monitoring
    - Alarm notification

- **Security**
  - **Securing of Airspace**
  - Region: NAM, EMEA
  - Product: SmartFlex
  - Application: Secures the World's Airspace with multi-edge computing
  - Features:
    - PoE PSE powering of connected camera
    - SmartFlex’s on-board Wi-Fi provides a local connection for on-site technicians
    - Serial interface RS232
    - WebAccess/VPN
### Regional Service & Customization Centers
